Education

Expected Graduation: **Bachelor of Science in Biology**, *California State University, Stanislaus*, Turlock, California.
May 2026

Relevant Coursework: Genetics, Microbiology, Cell Biology, Ecology, Bioinformatics, Public Health, and Computer Science coursework in Java, Python, and SQL

Research Experience

California State University, Stanislaus

2026 **Genome Analysis Projects in BIOL 4810.**

Performed genome assembly, genome annotation, and species identification using bioinformatics tools and reproducible workflows.

Project Work:

- Performed genome assembly using SPAdes
- Conducted quality control using FASTQC and FASTP
- Annotated bacterial genomes using Prokka
- Used BLAST for species identification
- Interpreted genomic data and documented results
- Created reproducible workflows using Galaxy
- Evaluated genome quality using QUAST and CheckM2
- Performed phylogenetic and comparative genomic analysis
- Conducted sequence alignment using T-Coffee
- Used ABRicate for genomic screening and analysis
- Worked with microbial sequencing datasets and biological data interpretation
- Used GitHub for workflow organization and project documentation

Course and Field Based Experience: **Ecological Observation and Data Collection**, *California State University, Stanislaus*.

Completed ecological field observations and biological data collection assignments involving habitat assessment, species identification, and environmental documentation.

Field Work

Experience:

- Conducted ecological field observations and environmental assessments
- Recorded biodiversity and habitat data in field settings
- Performed species identification and observational data collection
- Organized and interpreted ecological and biological datasets

Work Experience

Intern **Information Technology Intern**, *Bay Valley Tech*, Modesto, California.

Assisted with basic information technology tasks and supported technical operations in a professional office environment.

Responsibilities:

- Assisted with basic computer troubleshooting and technical support
- Helped organize and maintain digital files and systems
- Supported general office technology operations
- Worked with team members on technical and administrative tasks
- Gained experience in professional communication and workplace collaboration

Course Based **Laboratory and Computational Project Work**, *California State University, Stanislaus*.

Experience Completed hands on biological and computational assignments using real data while following directions, meeting deadlines, and maintaining careful documentation.

Responsibilities:

- Completed lab and data based assignments with attention to detail
- Followed laboratory safety procedures and class protocols
- Worked independently and as part of a team on course projects
- Organized results and prepared written summaries of findings

Computer skills

Programming Languages Java, Python, SQL

Bioinformatics Tools Galaxy, BLAST, SPAdes, Prokka, FASTQC, FASTP, QUAST, CheckM2, ABRicate, TYGS, iTOL, T-Coffee

Software Skills Microsoft Excel, Microsoft Word, PowerPoint, GitHub, Eclipse IDE

Data Analysis Skills Biological data analysis, spreadsheet organization, graph interpretation, ecological data recording, scientific documentation

Laboratory Skills Pipetting, microscopy, sterile technique, bacterial culture handling, sample preparation, laboratory safety procedures, experimental documentation

Other Skills Attention to detail, teamwork, problem solving, following safety protocols, scientific communication, workflow organization, public health outreach and event coordination

Position of Responsibility

Current **Treasurer, Latinos in Healthcare**, California State University, Stanislaus.

Role:

- Help manage organization funds and budgeting
- Assist with planning events and student outreach
- Participate in public health related student engagement activities
- Support basic event coordination and organization outreach
- Work with other members to support student involvement
